Introduction

The name AUDIVINA comes from the combination of the words Audi which means listening and the Sanskrit word Vina meaning sitar. The sitar is a South Asian traditional plucked string instrument. What makes it unique is that it allows a musician to adjust the position of the frets according to the piece of the music being played.

HIFIMAN Electronics' AUDIVINA closed-back planar studio headphone gives recording pros and hobbyists a detailed, accurate representation of their music, podcasts, and more. It's an ideal choice for musicians.

Acoustically Invisible Stealth Magnets

The advanced magnet design featured in the AUDIVINA is acoustically transparent, dramatically reducing wave diffraction turbulence that typically degrades the integrity of the sound waves. The result is reduced distortion, yielding a purer, more harmonious sound that is demonstrably better than previous designs.

Unlike the sound waves that are created by conventional magnets, the unique shape of stealth magnets enable soundwaves to pass through the magnet without generating interference.

Degradation of sound quality in a conventional planar magnetic headphone is caused by the magnets getting in the way of the sound wave.

The same happens in conventional electrostatic headphones, where the degradation of sound quality is caused by the stator's interference.

A conventional dynamic driver's frequency response can be altered due to distortions and vibrations across the diaphragm surface.
